Data Entry

RCM Aeroservices Inc. undertakes confidential front-end work required in the professional entry of a variety of data.

These include, for example, technical data, maintenance data, flight operation data, log entries, Pilot Reports, (PIREPS) Maintenance Reports, (MAREPS) Out of Service Reports, (OOS) and Flight Interruptions. (delays, cancellations and turn backs)

We receive raw data in any format, and, in consultation with the client, enter it into an electronic format with appropriate event coding that has practical relevance to the client.

Our work involves the careful manipulation of data to improve its utility, including cleansing, verification and the elimination of duplication. We also develop automated solutions that dramatically reduce data processing times, providing quick turnaround to our clients.

Our clients are presented with a formatted data file that can be used to assist in their own further analysis.

All files are secured and backed up.
